

Instructions for Classification 2 part Cards – Evergreen & Deciduous Trees

This PDF is laid out as a grid. The grid lines should be used as a guide when cutting.

The following pages contain pictures of evergreen & deciduous trees with the names underneath and pictures with the names separate. & two classification cards. The pictures show the tree in winter and summer. Where there is no change in the winter/summer foliage the tree is considered evergreen. The pictures can be printed on white card & mounted on green card. The evergreen classification card can be printed on light green card & the deciduous card on light blue card.

This material can be used in several ways after the topic of evergreen & deciduous trees have been introduced to the child & the child has experienced real trees.

1. Print the unnamed twice and use as a simple matching exercise using just the pictures
2. Using either the unnamed or named pictures & the classification cards separate the trees into evergreen & deciduous by discussing what can be seen in the picture and placing it on the correct classification card.
3. As a more advanced matching exercise using one set of pictures with name cards attached as a frieze (stuck together like a book) and the other set of pictures with the name cards separated from the picture (loose). The child uses the frieze as a control, places the pictures down and matches the right name card to the right picture.
4. As the child becomes more confident he/she can lay out the frieze as before but turn it so the picture cannot be seen. The child matches the unnamed card and the name card. Once the work is complete the child check his/her work by referring to the control.

All downloads are for your personal use and can be used within your setting but cannot be sold or uploaded to your own website or social media page.
