

Parts of the Leaf – 3 part matching cards DIY Version

This PDF is laid out with two pages per sheet. The black line should be used as a guide when cutting.

Pages 2 - 7 contain both named and unnamed pictures for the parts of the leaf.

Print each page on white paper, cut along the black line so each page is cut in two, trim each section so that when mounted on green card a green border is visible. Highlight the part of the leaf named using whatever colour you choose.

Page 8 contains the names associated with the picture cards name. There are more name slips on the page than needed but it would be a waste of paper not to print them out and we're sure you'll find a use for them. Separate each name tag using the grid lines as a guide. Trim each card and mount on green card so a green border is visible.

Page 9 contains a black line master which you can photocopy and give to the child to make their own parts of the leaf book or the child can draw their own leaf and label it.

1. Use the pictures as a discussion aid. Asking children what they know about leaves and if they know what part of the leaf is highlighted, where a leaf can be found etc.
2. Print the unnamed pictures twice and use as a simple matching exercise.
3. Match the unnamed pictures to the named pictures and match the corresponding name card.
4. As children work through the material they can make their own book of the leaf by using the blank master on page 9 or by drawing their own leaf and highlighting the various parts.

All downloads are for your personal use and can be used within your setting but cannot be sold or uploaded to your own website or social media page.
